

► Figure 1: Cheyenne Economic Health Index (ChEHI) as of June 2026

► Figure 2: Change in ChEHI - Last 6 Months

► Figure 3: Change in Components of ChEHI - June 2026

► Figure 4: Laramie County and Wyoming Unemployment Rate (Not Seasonally Adjusted or NSA)

► **SUMMARY:** The Cheyenne Economic Health Index (ChEHI) reported a value of 109.3 in June (see Figure 1). This value is higher than the June 2025 value of 108.6.

► As seen in Figure 2, in each of the past six months (January 2026 - June 2026), the ChEHI reported year-over-year increases, with the largest increase occurring in June (+0.7%).

► Two of the four ChEHI components increased in June compared to June 2025, with total sales & use taxes increasing the most, up 21.4% (see Figure 3). Total employment is the only component that declined, down 2.2%.

► The unemployment rate (NSA) for Laramie County in June was 2.7%, lower than the June 2025 rate of 3.3%, but slightly higher than the state-wide June 2026 rate (see Figure 4).

Note: Both unemployment rates in Figure 4 are not seasonally adjusted.

► Figure 5. Laramie County Total Nonfarm Employment (Seasonally Adjusted)

► The total number of nonfarm payroll jobs in June was 48,700, lower than the June 2025 number by 1,100 (-2.2%) (see Figure 5). This is the sixth consecutive year-over-year decline in employment.

► NOTE: MSA stands for Metropolitan Statistical Area. The Cheyenne MSA covers all of Laramie County.

► Figure 6. Laramie County 4% Sales and Use Tax Collections (1-Month Lag) - Nominal Dollars

► Laramie County's collection of the 4% sales and use tax was \$15.7 million in June, \$3.2 million more (+25.6%) than June 2025 (see Figure 6).

Note: The value for June 2026 in Figure 6 is actually collections from July 2026 because there is approximately a 1-month lag between collections and sales activity.

► Figure 7. Change in Laramie County Average Home Value - Nominal Dollars

► Laramie County's average home value was \$396,200 in June, 3.5% higher than June 2025 (see Figure 7). Laramie County's average home value growth has been strong in 2026, increasing year-over-year by 3% or more in each of the first six months.

Cheyenne Economic Health Index Addendum

The Cheyenne Economic Health Index (ChEHI) is a coincident economic indicator designed to provide a current assessment of Laramie County's economy. There are four components of the ChEHI. The first two components, unemployment rate and total nonfarm employment, are included to capture overall labor market activity for Laramie County. The third component, sales and use tax collections, captures economic activity related to taxable sales in Laramie County. The fourth component, average home value, serves as a proxy for the housing market.

Unemployment Rate: The first component of the ChEHI is the unemployment rate. This statistic measures the percentage of people in Laramie County actively looking for work but do not have jobs. In the ChEHI model, the employment rate (100% minus the unemployment rate) is indexed rather than the unemployment rate because an increase in the employment rate, similar to an increase in total employment, sales and use tax collections, and home prices, is considered to be a positive for the county's economy. The unemployment rate is available monthly, not seasonally adjusted, from the U.S. Bureau of Labor Statistics. The data is then seasonally adjusted.

Total Nonfarm Employment: The second component of the ChEHI is total nonfarm employment. This statistic measures the number of people who have wage or salary jobs in Laramie County. The total nonfarm employment is available monthly, seasonally adjusted, from the U.S. Bureau of Labor Statistics.

Sales & Use Tax: The third component of the ChEHI is the sales and use tax collected from the state's 4 percent tax rate. Because sales and use tax collections the county receives for a given month represent transactions that took place 4 to 6 weeks prior, the data is lagged one month in the ChEHI model. This statistic is available monthly from the State of Wyoming's Department of Revenue. The data is adjusted for inflation using the Consumer Price Index for All Urban Consumers from the U.S. Bureau of Labor Statistics. The data is also seasonally adjusted.

Average Home Value: The fourth component of the ChEHI is the average home value. This statistic is available monthly from Zillow. This variable is defined as the average home value for a single family home. The data is adjusted for inflation using the Consumer Price Index for All Urban Consumers from the U.S. Bureau of Labor Statistics. The data is also seasonally adjusted.

Methodology: Each series for the components discussed above are standardized starting in January 2005, resulting in a value of 100 for each component and the ChEHI. As each component changes from month to month, the ChEHI value changes. Next, the standard deviation of each component's standardized series values is calculated, followed by the calculation of the inverse of each component's standard deviation. Lastly, the individual inverse standard deviations are standardized, resulting in weights that sum to 1. The rationale for this weighting approach is that the components that are more stable over time will have a smaller standard deviation and thus, a larger inverse standard deviation and weight. A large shift in a typically stable data series would provide a better signal of a change in the economy than a large shift in a data series that typically has large fluctuations. Therefore, this weighting approach allows the ChEHI to put a larger weight on the more stable components so that if they do experience a large shift, the ChEHI's value will be affected more to represent the change in the county's economic conditions. Lastly, a 3-month moving average is used in order to smooth out the index. This helps eliminate large "spikes" that may occur due to a certain component recording an unusually high or low value in a given month.
