WYOMING EMPLOYMENT, INCOME, AND GROSS DOMESTIC PRODUCT REPORT

August 2007

Prepared by
Lisa Sexton, Intern

Supervised by
Amy Bittner, Economist

Department of Administration and Information
Economic Analysis Division

“To coordinate, develop, and disseminate economic & demographic research and information.”

STAFF

Buck McVeigh – *Administrator*
Justin Ballard – *Senior Economist*
Dr. Wenlin Liu – *Senior Economist*
Jim Robinson – *Senior Economist*
Amy Bittner – *Economist*
Jamie Rinehart – *Financial/Statistical Technician*

Other information available from the
Economic Analysis Division:

Consensus Revenue Estimating Group – State Revenue Forecast
Equality State Almanac
Housing Information
Wyoming Cost of Living Index
Wyoming Economic and Demographic Forecast
Wyoming Sales, Use, and Lodging Tax Revenue Report
Wyoming State Data Center*
Population Estimates and Forecasts

*The Wyoming State Data Center Program is a joint effort between the Economic Analysis Division and the U.S. Census Bureau. The State Data Center acts as the Census information clearinghouse for the entire state. The extensive data library includes Federal, state, and county information on income, employment, demographics, population, and more.

North American Industry Classification System (NAICS)	94-96

INTRODUCTION

The *2007 Wyoming Employment, Income, and Gross Domestic Product Report* serves as a compendium of Federal government data, with Wyoming and the twenty-three counties detailed. The report contains several of the best indicators of Wyoming's demographic and economic growth and is presented in a format which can be easily used for planning and projection purposes.

Specifically, data contained within this publication include:

- Employment, employment by industry, and unemployment data for the U.S., individual states, Wyoming, and counties.
- Income descriptions such as total personal income, per capita personal income, and total personal income by source and earnings by major industry, and average wage and salary per job are presented for the U.S., Wyoming, and counties.
- Personal transfer receipts and farm income for Wyoming.
- Total Gross Domestic Product data for the U.S. and individual states; Gross Domestic Product by industry for the U.S. and Wyoming.

All information contained herein, except unemployment rate data, was obtained from the U.S. Bureau of Economic Analysis (BEA). The U.S. Bureau of Labor Statistics (BLS) served as the source for the unemployment rate data. Source websites are listed below:

U.S. Bureau of Economic Analysis (BEA): <http://www.bea.gov>

U.S. Bureau of Labor Statistics (BLS): <http://www.bls.gov/>

The BEA compiles employment and income data on a place of work basis, therefore a residence adjustment has been made. Employment and income data were compiled according to the North American Industry Classification System (NAICS). Gross Domestic Product was also compiled using NAICS. NAICS is a classification system developed jointly by the U.S., Canada, and Mexico to provide improved comparability in industrial statistics across North America. Detailed information about data compilation can be found in the Data Notes, Glossary, and Industry Classification section, pages 90-93. Definitions of the major sector classifications of NAICS are located on pages 94-96. Due to processing time, the release of a majority of the data is lagged approximately 24 to 48 months.

Additional information can be obtained by contacting:

Fax: (307) 632-1819

Economic and demographic data for Wyoming and its counties (including this report) are available electronically and can be found on the Economic Analysis Division's website:

<http://eadiv.state.wy.us>

SUMMARY

Employment

The United States has increased the number of occupied jobs from 167 million in 2001 to 174 million in 2005. This is a 4.3 percent rise in employment between 2001 and 2005. The State of Wyoming has almost doubled the nation's rate of increase, experiencing an 8.3 percent increase from 2001 to 2005. In Wyoming, 360,558 jobs were occupied in 2005. In relation to other individual states, Wyoming had the 10th highest employment percentage increase from 2001 to 2005; Nevada had the highest percentage increase in employment at 18.5 percent. The U.S. Bureau of Economic Analysis (BEA) calculates total employment by surveying individual employers and/or establishments. These employers calculate each employee working any number of hours in a given period of time; both part-time and full-time employees are counted. Some individuals could be counted more than once depending on if they occupy multiple jobs. Family owned businesses that have unpaid family laborers are also included.

Based on the North American Industry Classification System (NAICS), the United States has experienced the largest employment growth from 2001 to 2005 in the real estate and rental and leasing sector. In the years between 2001 and 2005, the United States experienced a housing boom where more homes were desired and homes were being sold for elevated prices. In Wyoming, the largest increase in employment occurred in the mining sector. Campbell, Sweetwater, and Sublette counties experienced dramatic increases in mining employment between 2001 and 2005. In Sublette County, from 2001 to 2005, mining employment nearly doubled from 432 to 849. In Wyoming, as activity in the mining industry escalated, employment in the accommodation and food services and real estate and rental and leasing sectors also increased. This is due to the number of new employees entering counties with active mining, which caused demand for homes, lodging and restaurants services. In addition to the increase in mining employment, there has been a rise in construction jobs. This increase can also be attributed to the expansion of the mining sector in Wyoming.

Chart 1 compares employment by industrial composition for the United States and Wyoming. The chart shows the large contribution by the government and government enterprises sector to the United States and Wyoming's employment. In 2005, government and government enterprises comprised 17 percent of the United States total employment and 21 percent of Wyoming's total employment. In Wyoming, the mining sector plays a large role in the State's economy, but in the United States, as a whole, the mining sector has one of the smallest contributions to overall employment. In Wyoming, other industries that are affected by the expansions in the mining sector, also contributed large portions to total employment, such as the construction, leisure and hospitality, and retail trade sectors. Both the United States and Wyoming have small employment numbers in the information sector.

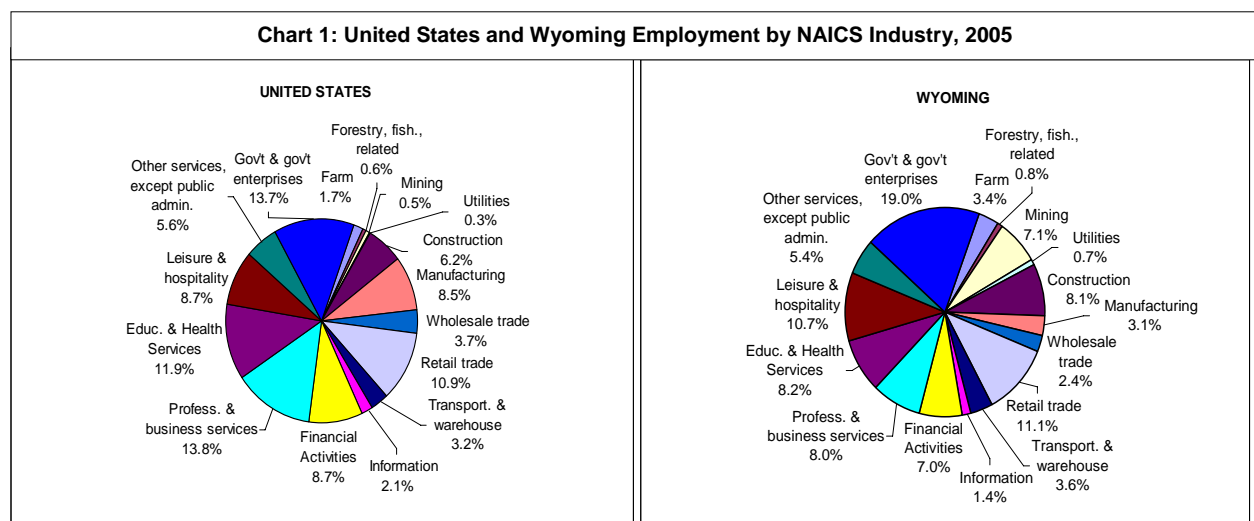

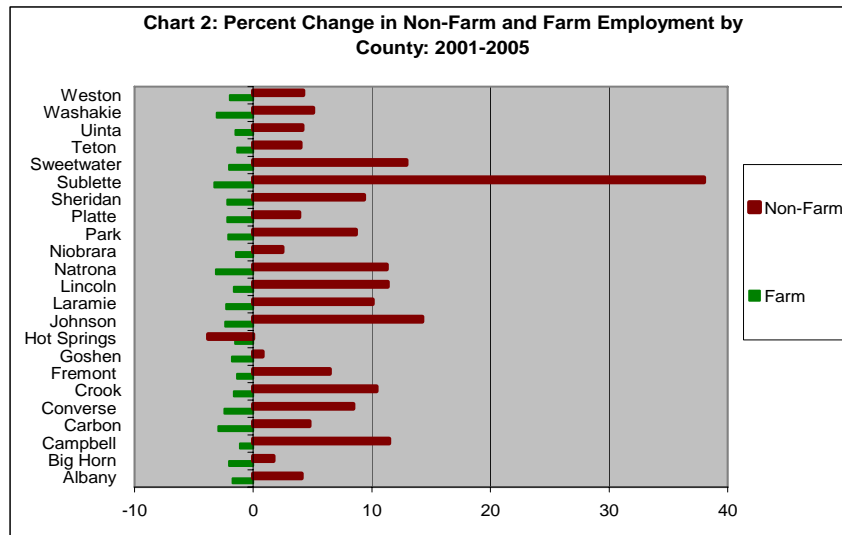

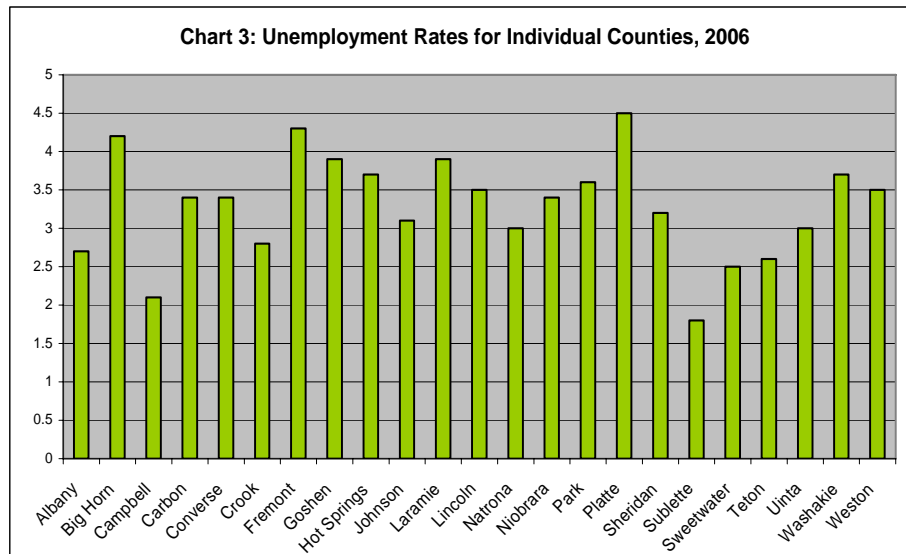

Chart 2 illustrates the decrease in farm employment in comparison to the dramatic increase in non-farm employment for Wyoming's individual counties from 2001-2005. During this time, the United States also experienced a decrease in farm employment of 4.6 percent and a 4.5 percent increase in non-farm employment. Farm employment in Wyoming decreased by 2.0 percent and non-farm employment jumped 8.7 percent from 2001-2005. The chart demonstrates how each county in Wyoming encountered a decrease in farm employment between 2001 and 2005 and a rise in non-farm employment, with the exception of Hot Springs County. Sublette County experienced the most dramatic increase in non-farm employment with a 38 percent increase in the five-year span. In contrast, Hot Springs County experienced a 3.8 percent decrease in non-farm employment, which is larger than the 1.5 percent decrease in farm employment. Hot Springs County actually experienced a decrease of 3.7 percent in total employment during the 2001 to 2005 period. Rural counties such as Crook, Goshen, Hot Springs, Niobrara, and Weston all experienced smaller growth in employment due to the lack of job opportunities in these areas. The lack of jobs also contributes to the younger and more educated population migrating out from these rural counties. These factors contribute to the smaller increases in both farm and non-farm employment.

Unemployment is defined as a person who is currently over the age of sixteen, who is not employed, but is capable of working, and is actively seeking employment in a specified time period. The unemployment rate is calculated by dividing the number of unemployed persons by the total civilian labor force. In 2006, the United States' unemployment rate was 4.6 percent. In the same year, the State of Wyoming had a 3.2 percent unemployment rate, which is lower than the national average. As of 2006, Sublette County had the lowest unemployment rate in the State, 1.8 percent. Platte County, in Southeast Wyoming, had the highest unemployment rate, 4.6 percent. Although Platte County's unemployment rate is larger than any other county in the State, it is still lower than the United States' unemployment rate. Since 1997, the unemployment rates for Wyoming have been steadily decreasing and hit a low in 2006. Although the State of Wyoming has a low unemployment rate it still does not surpass that of Hawaii with only 2.4 percent unemployed in 2006.

Chart 3, on the following page, shows the unemployment rates for Wyoming's individual counties in 2006. Sublette County experienced large increases in employment due to the heightened mineral activity, as well other counties including Campbell and Sweetwater, which had the second and third lowest unemployment rates in the State. Platte, Fremont, and Big Horn counties had the highest unemployment rates in the State in 2006. Although Wyoming has kept steady employment growth resulting from the mineral boom, not all counties are as significantly affected. In the past and currently, Wyoming has had to deal with the problem of retaining and keeping younger workers in the State as well as sustaining higher

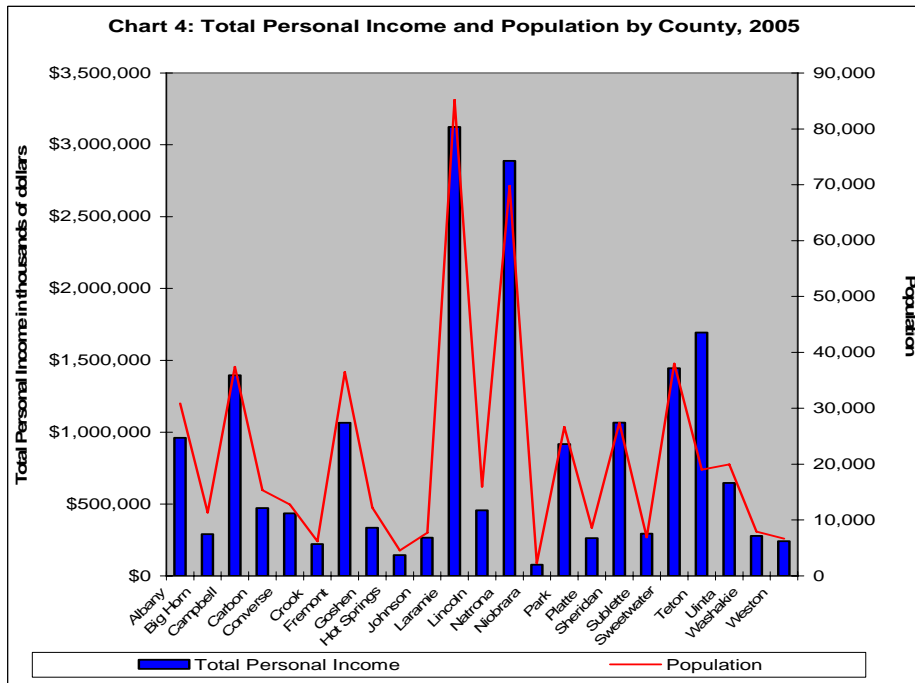

growth jobs. While presently, employment has been on a rise, this growth is significantly tied to what happens in the mineral industry.

Income

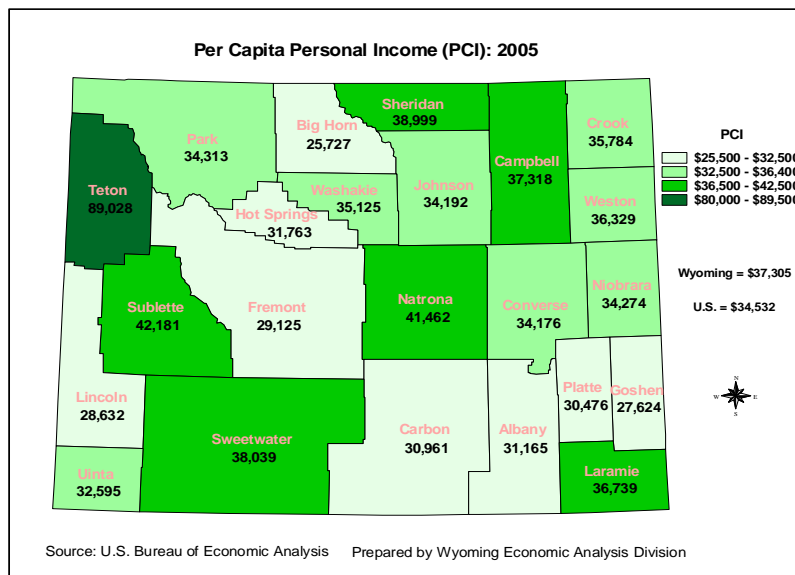

Total Personal Income (TPI) is a measure of income received by all residents of a particular area from all sources, calculated after deductions of personal contributions to Social Security, but before personal tax deductions. This sum includes net earnings by place of residence, rental income, personal dividend income, personal interest income, and transfer receipts. Income is broadly defined as income from all sources, i.e. businesses; Federal; state, local, and foreign governments; households; and institutions. Wyoming's TPI was \$18 billion in 2005, which compared to other states was the lowest amount. The State's low TPI is a result of Wyoming possessing a small population. Wyoming's growth in TPI is due to the mining activity in the State. Each county in Wyoming contributes to the State's Total Personal Income. Laramie and Natrona counties comprised 17.9 percent of Wyoming's Total Personal Income in 2005. These counties contribute such a large percentage of TPI because TPI is derived from all sources of income from all residents and Laramie and Natrona counties have the two largest county populations in the State. On the reverse side, Niobrara County contributes the least amount to the State's TPI, and also has the smallest population, only 2,286 persons in 2005.

Chart 4, on the next page, shows the relationship between each county's contribution to Wyoming's Total Personal Income and the population of each county. As shown in the chart, the bigger the population of the county, the larger the amount of TPI. Laramie and Natrona counties have both the largest populations and the largest contributions to Wyoming's TPI. Niobrara and Hot Springs counties have both the lowest input of TPI and the smallest populations. Although Total Personal Income is largely based on population it is also based on economic activity in an area. An example of this is depicted in Chart 4; Teton County had a population of 19,288 in 2005, but has the third highest TPI behind Laramie and Natrona counties. Teton County's large TPI can be attributed to factors such as investment and dividend income. Another example includes Fremont and Sweetwater counties, which had similar-sized populations in 2005. Fremont County's population was 37,163 people and Sweetwater County, 38,763 people, but Sweetwater County's Total Personal Income is \$380 million more than that of Fremont County because of more economic activity due to mining.

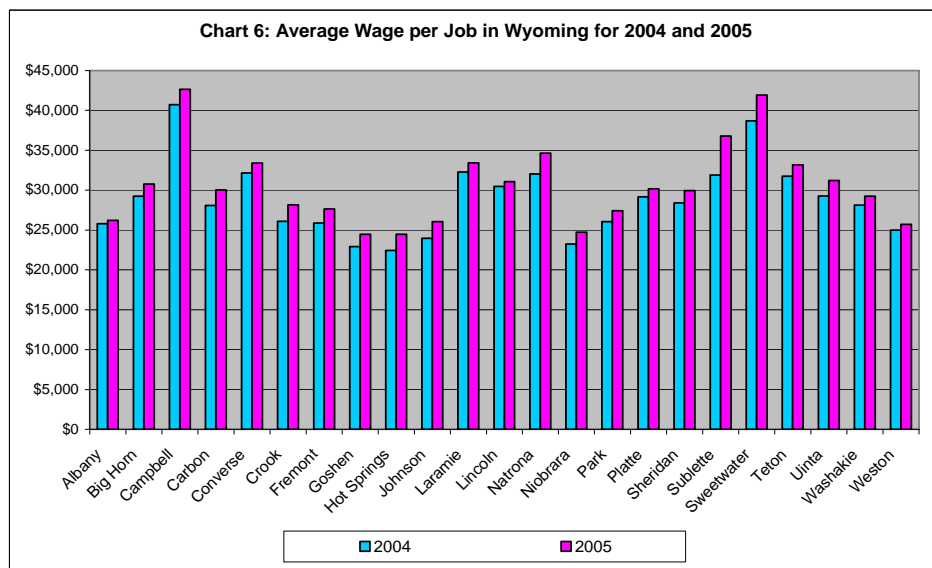

Wyoming's per capita income (PCI) was \$37,305 in 2005. Wyoming's per capita income was \$2,564 more than that of the United States in 2005. Wyoming has a larger per capita income due to the size of its population and the rise in higher paying jobs associated with the mining industry. Per capita income is derived by dividing Total Personal Income of a particular area by the population of that same region. In the United States, the District of Columbia had the highest per capita income, \$52,811 in 2005, due to the small population and jobs that pay higher wages. In the State of Wyoming, Teton County has the highest per capita income in 2005 at \$89,028. Teton County has a higher per capita income due to the large amount of investments and interest income for people who reside in the county. Sublette County, with not even half of Teton County's PCI, had the second highest per capita income in Wyoming for 2005. Counties with mining extraction such as Sublette, Sweetwater, and Campbell counties tend to record higher per capita incomes than other areas in the State. Chart 5, provides a visual picture of PCI by county for Wyoming.

Chart 5

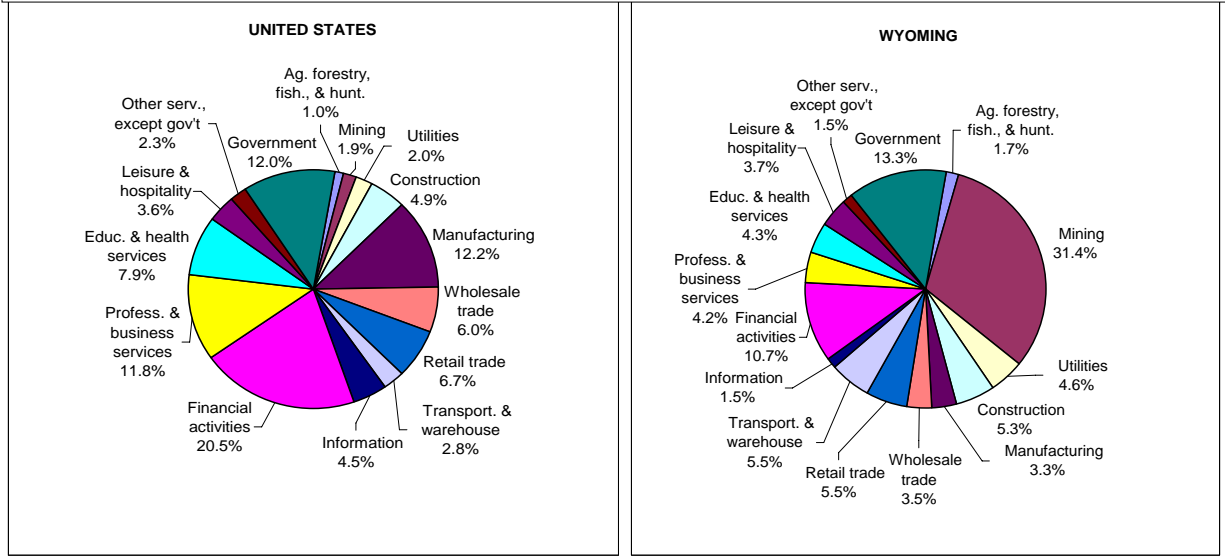

The Wyoming county with the highest wage per job in 2005 was Campbell County, \$42,662. In the same year, the United States' average wage per job was \$40,146. The Mideast Region of the United States, which includes Delaware, the District of Columbia, Maryland, New Jersey, New York, and Pennsylvania, had the highest wage per job, \$46,696. The Rocky Mountain Region, including Colorado, Idaho, Montana, Utah, and Wyoming, had an average wage per job of \$36,209, which is higher than the average for the State of Wyoming, \$33,069. Counties that had the highest average wage per job in 2005 were Sweetwater, Campbell, Sublette, and Natrona. This is a result of the higher paying mining jobs in these counties. Some non-mining counties that had higher wage jobs include Laramie and Teton counties. Albany County had a lower wage per job due to the large amount of students in the area working low paying and part-time jobs. The chart below compares average wage per job in Wyoming for 2004 and 2005. All counties had an increase in wage rate from 2004 to 2005. The most dramatic increase in average wage per job was for Sublette County with an increase of \$4,911 from 2004 to 2005. The larger increase in average wage in this particular county is due to the lucrative paying jobs associated with mining industry. Other counties affected by the mining industry include Campbell, Natrona, and Sweetwater.

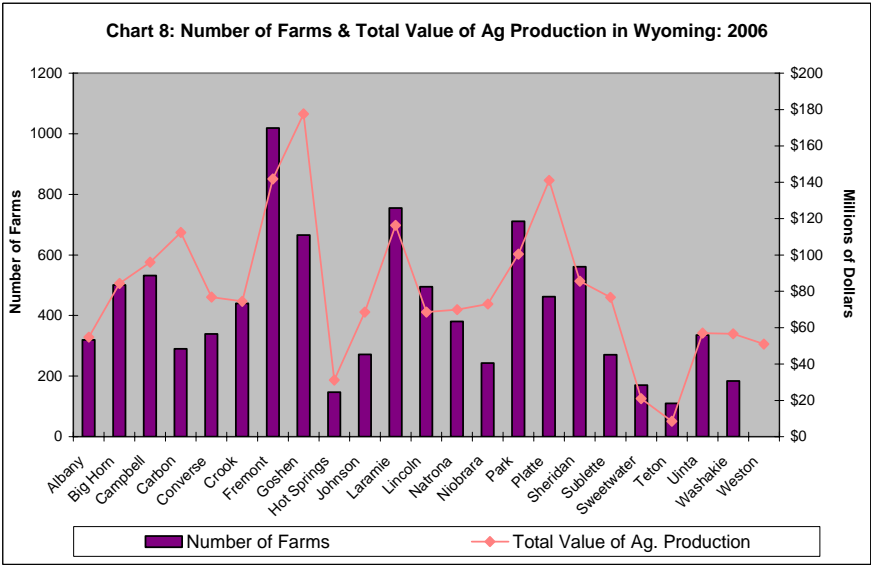

Gross Domestic Product (GDP)

Previously known as Gross State Product (GSP), GSP is now referred to as Gross Domestic Product (GDP) by State. GDP by state is a comprehensive measure of economic activity within a state. It is the total value of goods and services produced by the labor and property in a state, and is equivalent to sales less intermediate inputs. It is a value-added concept similar to the national measure of GDP. Increases in GDP can be attributed to a rise in the quantity or price of production. GDP is often reported in both current or nominal dollars as well as constant or chained dollars. Current dollars reflect the price of the period being measured. Constant or chained dollars measure the market value of goods and services using a constant or base year set of prices. This eliminates the effects of inflation and gives a more accurate depiction of GDP growth. GDP for the State of Wyoming was \$29.6 billion in 2005. The following chart compares Gross Domestic Product for the United States and Wyoming by NAICS industry. Chart 7, on the following page, shows the large contribution that the mining sector has on Wyoming's GDP. On the other hand, for the U.S., mining is a very small component of national GDP. For the United States, the financial activities sector makes up the largest component of national GDP. Financial activities include the finance and insurance and the real estate and rental and leasing sectors. In Wyoming, financial activities contribute a smaller fraction to state GDP than the mining and government sectors. Similarly, both the United States and the State of Wyoming have relatively low contribution to GDP from the agriculture, forestry, fishing, and hunting sector.

Chart 7: United States and Wyoming Gross Domestic Product (GDP) by NAICS Industry, 2005

Even though the State of Wyoming experienced dramatic decreases in employment and Gross Domestic Product for the agriculture, forestry, fishing, and hunting sector for several years and the fact that this sector represents a small portion of Wyoming's economy, agriculture does contribute to the State's quality of life. In 2006, there were 9,200 farms in Wyoming and the average farm size was 3,780 acres, while the average size of a farm in the United States was only 446 acres. In 2006, there were 1.4 million cattle and calves, 460,000 sheep and lambs, and 100,000 hogs and pigs in the State. Hay is the leading agricultural crop in Wyoming with a value of production totaling \$190.3 million in 2006. Cattle and calves account for the largest value in agriculture production, \$1.4 billion and sheep and lambs come in second with a value of \$63 million. Chart 8 illustrates the number of farms in each county in Wyoming for 2006 and the total value of agricultural production. Goshen County had the highest value of agricultural production, \$177.6 million and Teton County possessed the smallest amount of agricultural production value, \$8.5 million. Teton County also had the smallest number of farms in the State with 110 farms and Fremont County had the largest number of farms, 1,019. Counties with a strong agriculture presence include Niobrara, Goshen, Crook, and Big Horn. Agriculture helps sustain these areas and contributes to Wyoming's culture and history.

PART II: INCOME

A. TOTAL PERSONAL INCOME

United States, Regions, and Individual States: 1997-2005
United States, Wyoming, and Individual Counties: 1997-2005

B. PER CAPITA PERSONAL INCOME

United States, Regions, and Individual States: 1997-2005
United States, Wyoming, and Individual Counties: 1997-2005

C. TOTAL PERSONAL INCOME BY MAJOR SOURCE & EARNINGS BY MAJOR INDUSTRY

United States: 2001-2005
Wyoming: 2001-2005
Individual Counties: 2001-2005

D. AVERAGE WAGE PER JOB

United States, Regions, and Individual States: 1996-2005
Wyoming and Individual Counties: 1996-2005

E. PERSONAL TRANSFER RECEIPTS

Wyoming: 1997-2005

F. FARM INCOME & EXPENSES

Wyoming: 2001-2005

G. FOOTNOTES

Total Personal Income for the United States, Regions, and Individual States (part 1)

FOOTNOTES

Total Personal Income:

- (1) U.S. Census Bureau mid-year population estimates. Estimates for 2000-2005 reflect county population estimates available as of March 2007
- (2) Contributions for government social insurance are included in earnings by type and industry, but they are excluded from personal income.
- (3) The adjustment for residence is the net flow of the earnings of inter-area commuters. For the United States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less wage and salary disbursements to Canadian and Mexican residents commuting into the United States. The estimates of personal income are presented by the state and county of residence of the income recipients. However, the source data for most components for government social insurance area are done on a place-of-work basis. Consequently, a residence adjustment is made to convert the estimates.
- (4) Rental income of persons includes the capital consumption adjustment.
- (5) Proprietors' income includes the inventory valuation adjustment and capital consumption adjustment.
- (6) Based on the 2002 North American Industry Classification System (NAICS).
- (7) "Other" consists of wage and salary disbursements to U.S. residents employed by international organizations and foreign embassies and consulates in the United States.

Transfer Receipts:

- (1) Consists largely of temporary disability payments and black lung payments.
- (2) Consists of medical and other medical vendor payments.
- (3) Consists of payments made under the Tricare Management Program (formerly called CHAMPUS) for the medical care of dependents of active duty military personnel and of retired military personnel and their dependents at nonmilitary medical facilities.
- (4) Through 1995, consists of emergency assistance and aid to families with dependent children. For 1998 forward, consists of benefits—generally know as temporary assistance for needy families—provided under the Personal Responsibility and work Opportunity Reconciliation Act of 1996. For 1996-1997, consists of payments under all three of these programs.
- (5) Consists largely of general assistance, refugee assistance, foster home care and adoption assistance, earned income tax credits, and energy assistance.
- (6) Consists of trade readjustments allowance payments, Redwood Park benefit payments, public services employment benefit payments, and transitional benefit payments.
- (7) Consists largely of veterans' readjustment benefit payments, educational assistance to spouses and children of disabled or deceased veterans, payments to paraplegics, and payments for autos and conveyances for disable veterans.
- (8) Consists largely of federal fellowship payments (National Science Foundation fellowships and traineeships, subsistence payments to State maritime academy cadets, and other federal fellowships), interest subsidy on higher education loans, basic educational opportunity grants and Job Corps payments.

(9) Consists largely of Bureau of Indian Affairs payments, education exchange payments, Alaska Permanent Fund dividend payments, compensation of survivors of public safety officers, compensation of victims of crime, disaster relief payments, compensation for Japanese internment, and other special payments to individuals.

(10) Consists of State and local government educational assistance payments to nonprofit institutions, and other State and local government payments to nonprofit institutions.

(11) Consists largely of personal injury payments to individuals other than employees and other business transfer payments.

Part III: GROSS DOMESTIC PRODUCT (GDP)

A. GROSS DOMESTIC PRODUCT

United States, Regions, and Individual States in Current Dollars: 1997-2006
United States, Regions, and Individual States in Chained 2000 Dollars: 1997-2006

B. GROSS DOMESTIC PRODUCT BY NAICS INDUSTRY

United States in Current Dollars: 2000-2005
United States in Chained 2000 Dollars: 2000-2005
Wyoming in Current Dollars: 2000-2005
Wyoming in Chained 2000 Dollars: 2000-2005

DATA NOTES

EMPLOYMENT:

Employment, as defined by the U.S. Bureau of Labor Statistics (BLS), is the total number of persons who, during the reference week: a) performed any type of labor for pay or profit, b) worked at least 15 hours on an unpaid basis in family enterprises, or c) was temporarily absent from work for non-economic reasons. Excluded are persons whose only activity consisted of work around their own house or volunteer work. Each employed person is counted only once, even if he or she holds more than one job.

The U.S. Bureau of Economic Analysis's (BEA) methodology for calculating employment figures differ in that it is a count of occupied jobs, not employed people. Employment under this definition includes all full-time and part-time jobs. If an individual holds two separate jobs at any given time, the individual is counted twice, since two employment positions are occupied.

Unemployment rates are from the BLS. Unemployed persons include those persons who did not work during the reference week, were available for work, and had made specific efforts to find employment. The unemployment rate is calculated by dividing the number of unemployed persons by the total civilian labor force.

TOTAL PERSONAL INCOME:

Total personal income (TPI), as defined by the BEA, is the current income of residents of a particular area from all sources. It is measured after deductions of personal contributions to Social Security, but before personal tax deductions have been made. It includes income received from business; federal, state, and local governments; households; institutions; foreign governments; other labor income (such as employers' contributions to private social insurance programs); farm and non-farm proprietor income; dividends, interest, and rent; and transfer payments. It is the only key economic indicator which is adjusted for seasonality; it is not, however, adjusted for price changes.

Because TPI is a measure of income received, estimates of state and local area personal income should reflect the residence of the income recipients. Of the six major components of personal income, three are recorded on a place-of-residence basis. They are transfer receipts or payments; dividends, interest, and rental income; and proprietors' income. The data available at the state and county level for wages and salaries; other labor income; supplements to wages and salaries; and personal contributions for social insurance, are estimated from data that are recorded by place-of-work.

Four adjustments are made to earnings by place of work to derive total personal income by place of residence. Following these adjustments, total earnings still comprise the bulk of total personal income. Beginning with total labor and proprietor earnings, the first adjustment is made by deducting contributions for social insurance. Although these are considered part of employee total earnings for the current period, social insurance contributions are not received during the current period and are, therefore, not included in personal income.

The second adjustment is made for employee place of residency. The BEA defines employee residency as the location at which the employee is residing while employed. An example of this type of adjustment is a regular occurrence in Sheridan County, Wyoming. Here, a significant number of employees work at coal mines in Montana, but reside in Sheridan County, Wyoming. Earnings for these employees show up as earnings data for Montana. However, in the derivation of personal income by place of residence, an adjustment is made to reallocate these earnings as personal income for Wyoming. This residency adjustment for Wyoming is, therefore, the net effect of all interstate place-of-work versus place-of-residence discrepancies.

A third adjustment is made by appending dividends, interest, and rental income. Dividends are payments in cash or other assets, excluding stock, by for-profit corporations to non-corporate stockholders in the state. Interest is the monetary and imputed interest income of persons from all sources. Rental income is the monetary income of persons from the rental of real property; the imputed net rental income of owner-occupants of non-farm dwellings; and the royalties received by persons from patents, copyrights, and rights to natural resources.

The fourth and final adjustment is the addition of transfer receipts or payments. Transfer receipts or payments are income payments to persons, generally in monetary form, for which they do not render current services. As a component of personal income, they are payments by governments and businesses to individuals and nonprofit institutions.

Once these four adjustments to the earnings by place of work component are made, the result is total personal income by place of residence. Personal income effectively measures the size of consumer markets. When presented by industry of origin, as in this report, earnings can also be interpreted as a measure of the size of industrial markets.

Per capita personal income (PCI) is calculated by dividing total personal income of the area by the total population of the area. Per capita personal income is a useful tool to compare income across regions, states, and counties. Per capita personal income can also be used to track income growth over time. It is also useful in that it removes the effect of population growth on TPI.

GROSS DOMESTIC PRODUCT

The BEA calculates gross domestic product (GDP) for a state as the sum of gross domestic product originating (GSPO) by industry in all industries. This measure of GSP is the state counterpart of the Nation's gross domestic product (GDP) by industry from the national income and product accounts (NIPA's).

The GDPO by industry is the contribution of each industry, including government, to GDP. An industry's GDPO, often referred to as its "value added", is equal to its gross output (sales or receipts and other operating income, plus inventory change) minus its intermediate inputs (consumption of goods and services purchased from other industries or imported).

For each industry, the estimate of gross domestic product is composed of four components (estimated in current-dollars only): (1) Compensation of employees; (2) proprietors' income with inventory valuation adjustment (IVA) and capital consumption allowances; (3) indirect business tax and non-tax liability (IBT); and (4) other, mainly capital related, charges. Most of the compensation and proprietors' income components of GDP are primarily based on BEA's estimates of earnings by place of work, an aggregate in the state personal income series. The IBT component of GDP reflects liabilities charged to business expense, most of which are sales and property taxes levied by state and local governments. The capital charges component of GDP comprises corporate profits with IVA, corporate capital consumption allowances, business transfer payments, net interest, rental income of persons, and subsidies less current surplus of government enterprises.

Current and constant (chained) dollar estimates of GDP by the North American Industry Classification System (NAICS) industry classification are presented for the U.S. and states for the years 1997-2006. Current and constant dollar estimates of GDP by NAICS industry classification are also presented for Wyoming and its counties for 2000-2005.

Glossary

Chained dollars - A measure used to express real prices. A measure used to approximate the chained-type index level and is calculated by taking the current-dollar level of a series in the base period and multiplying it by the change in the chained-type quantity index number for the series since the base period.

Current dollars – The market value of an item which reflects prices and quantities of the period being measured and has not been adjusted for inflation. For example, 2005 data in current dollars indicate values based on the worth of the dollar in the year 2005.

Industry – A group of establishments that produce similar products or provide similar services. For example, all establishments that manufacture automobiles are in the same industry. A given industry, or even a particular establishment within that industry, might have employees in dozens of occupations. The North American Industry Classification System (NAICS) groups similar establishments into industries.

Inflation – An increase in the level of consumer prices, or equivalently, a decline in the purchasing power of money. Inflation is defined as a time for generally rising prices for goods and factors of production.

NAICS (North American Industry Classification System) – A classification system developed jointly by the U.S., Canada, and Mexico to provide improved comparability in industrial statistics across North America. It replaced the Standard Industrial Classification (SIC) in 2000. A list of NAICS classifications can be found on pages 94-96.

Transfer receipts – Payments made by the government to individuals and non-profit institutions that are not in exchange for goods and services, such as Social Security payments, and are a component of personal income. This term was previously identified as transfer payments.

Industry Classification

The industry classifications utilized in this report are classified in accordance with the 2002 North American Industry Classification System (NAICS), published by the Federal Office of Management and Budget. The twenty major industrial sectors that comprise NAICS are: 1) Agriculture, forestry, fishing, and hunting; 2) Mining; 3) Utilities; 4) Construction; 5) Manufacturing; 6) Wholesale trade; 7) Retail trade; 8) Transportation and warehousing; 9) Information; 10) Finance and insurance; 11) Real estate and rental and leasing; 12) Professional, scientific, and technical services; 13) Management of companies and enterprises; 14) Administrative and support and waste management and remediation services; 15) Educational services; 16) Health care and social assistance; 17) Arts, entertainment, and recreation; 18) Accommodation and food services; 19) Other services (except public administration); and 20) Government.

For purposes of this classification, an establishment is an economic unit, generally at a single physical location, where business is conducted or where services or industrial operations are performed. Each establishment is assigned an industry code on the basis of its primary activity, which is determined by its principal product (or group of products) produced or distributed, or services rendered. Ideally, the principal product or service should be determined by its relative share of "value added" at the establishment. In practice, however, it is rarely possible to obtain this measure for individual products or services. Typically, it is necessary to adopt some other criterion which may be expected to give approximately the same results in determining the primary activity of an establishment.

Occasionally, in activity-diversified establishments, the appropriate measure cannot be determined or estimated for each product or service. In some instances, an industry classification based upon the recommended output measure will not adequately represent the relative economic importance of each of

the varied activities carried on at such establishments. In such cases, employment or payroll information should be used to determine the primary activity of a particular establishment.

Due to this broad categorization of multi-sector establishments under one code, estimates will frequently be understated in one sector and overstated in another. While this does not influence the accuracy of either county or state totals, it will obviously have an effect upon estimates for a particular sector.

Data from business tax returns, provided by the Internal Revenue Service, are used to generate detailed industrial estimates of self-employed individuals at the national level. At the state level, FICA (Federal Insurance Contributions Act) records on individuals making self-employed contributions are used to get first round estimates by industry. This has resulted in an increase in the count of self-employed individuals, which was prompted by the following factors. First, those proprietors who were previously only counted once in the Current Population Survey (CPS), but who are in fact proprietors of two or more businesses, are now being counted once for each business. In addition, all persons formerly classified solely as wage and salary employees, but who also spend some time as sole proprietors or participating partners in businesses, are now being counted in each of their multiple positions.

NORTH AMERICAN INDUSTRY CLASSIFICATION SYSTEM (NAICS)

11 Agriculture, Forestry, Fishing, and Hunting: The agriculture, forestry, fishing, and hunting sector comprises establishments primarily engaged in growing crops, raising animals, harvesting timber, and harvesting fish and other animals from a farm, ranch, or their natural habitats.

21 Mining: The mining sector comprises establishments that extract naturally occurring mineral solids, such as coal and ores; liquid minerals, such as crude petroleum; and gases, such as natural gas. The term mining is used in the broad sense to include quarrying, well operations, beneficiating (e.g., crushing, screening, washing, and flotation), and other preparation customarily performed at the mine site, or as a part of mining activity.

22 Utilities: The utilities sector comprises establishments engaged in the provision of the following utility services: electric power, natural gas, steam supply, water supply, and sewage removal. Within this sector, the specific activities associated with the utility services provided vary by utility: electric power includes generation, transmission, and distribution; natural gas includes distribution; steam supply includes provision and/or distribution; water supply includes treatment and distribution; and sewage removal includes collection, treatment, and disposal of waste through sewer systems and sewage treatment facilities.

23 Construction: The construction sector comprises establishments primarily engaged in the construction of buildings or engineering projects (e.g., highways and utility systems). Establishments primarily engaged in the preparation of sites for new construction and establishments primarily engaged in subdividing land for sale as building sites also are included in this sector.

31-33 Manufacturing: The manufacturing sector comprises establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. The assembling of component parts of manufactured products is considered manufacturing, except in cases where the activity is appropriately classified in sector 23, construction.

42 Wholesale Trade: The wholesale trade sector comprises establishments engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The merchandise described in this sector includes the outputs of agriculture, mining, manufacturing, and certain information industries, such as publishing.

44-45 Retail Trade: The retail trade sector comprises establishments engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The retailing process is the final step in the distribution of merchandise; retailers are, therefore, organized to sell merchandise in small quantities to the general public. This sector comprises two main types of retailers: store and non-store retailers.

48-49 Transportation and Warehousing: The transportation and warehousing sector includes industries providing transportation of passengers and cargo, warehousing and storage for goods, scenic and sightseeing transportation, and support activities related to modes of transportation. Establishments in these industries use transportation equipment or transportation related facilities as a productive asset. The type of equipment depends on the mode of transportation. The modes of transportation are air, rail, water, road, and pipeline.

51 Information: The information sector comprises establishments engaged in the following processes: (a) producing and distributing information and cultural products, (b) providing the means to transmit or distribute these products as well as data or communications, and (c) processing data.

52 Finance and Insurance: The finance and insurance sector comprises establishments primarily engaged in financial transactions (transactions involving the creation, liquidation, or change in ownership of financial assets) and/or in facilitating financial transactions.

53 Real Estate and Rental and Leasing: The real estate and rental and leasing sector comprises establishments primarily engaged in renting, leasing, or otherwise allowing the use of tangible or intangible assets, and establishments providing related services. The major portion of this sector comprises establishments that rent, lease, or otherwise allow the use of their own assets by others. The assets may be tangible, as is the case of real estate and equipment, or intangible, as is the case with patents and trademarks.

54 Professional, Scientific, and Technical Services: The professional, scientific, and technical services sector comprises establishments that specialize in performing professional, scientific, and technical activities for others. These activities require a high degree of expertise and training. The establishments in this sector specialize according to expertise and provide these services to clients in a variety of industries and, in some cases, to households. Activities performed include: legal advice and representation; accounting, bookkeeping, and payroll services; architectural, engineering, and specialized design services; computer services; consulting services; research services; advertising services; photographic services; translation and interpretation services; veterinary services; and other professional, scientific, and technical services.

55 Management of Companies and Enterprises: The management of companies and enterprises sector comprises (1) establishments that hold the securities of (or other equity interests in) companies and enterprises for the purpose of owning a controlling interest or influencing management decisions or (2) establishments (except government establishments) that administer, oversee, and manage establishments of the company or enterprise and that normally undertake the strategic or organizational planning and decision-making role of the company or enterprise. Establishments that administer, oversee, and manage may hold the securities of the company or enterprise.

56 Administrative and Support and Waste Management and Remediation Services: The administrative and support and waste management and remediation services sector comprises establishments performing routine support activities for the day-to-day operations of other organizations. These essential activities are often undertaken in-house by establishments in many sectors of the economy. The establishments in this sector specialize in one or more of these support activities and provide these services to clients in a variety of industries and, in some cases, to households. Activities performed include: office administration, hiring and placing of personnel, document preparation and similar clerical services, solicitation, collection, security and surveillance services, cleaning, and waste disposal services.

61 Educational Services: The educational services sector comprises establishments that provide instruction and training in a wide variety of subjects. This instruction and training is provided by specialized establishments, such as schools, colleges, universities, and training centers. These establishments may be privately owned and operated for profit or not for profit, or they may be publicly owned and operated. They may also offer food and accommodation services to their students.

62 Health Care and Social Assistance: The health care and social assistance sector comprises establishments providing health care and social assistance for individuals. The sector includes both health care and social assistance because it is sometimes difficult to distinguish between the boundaries of these two activities. The industries in this sector are arranged on a continuum starting with those establishments providing medical care exclusively, continuing with those providing health care and social assistance, and finally finishing with those providing only social assistance. The services provided by establishments in this sector are delivered by trained professionals. All industries in the sector share this commonality of process, namely, labor inputs of health practitioners or social workers with the requisite expertise. Many of the industries in the sector are defined based on the educational degree held by the practitioners included in the industry.

71 Arts, Entertainment, and Recreation: The arts, entertainment, and recreation sector includes a wide range of establishments that operate facilities or provide services to meet varied cultural, entertainment, and recreational interests of their patrons. This sector comprises (1) establishments that are involved in producing, promoting, or participating in live performances, events, or exhibits intended for public viewing;

(2) establishments that preserve and exhibit objects and sites of historical, cultural, or educational interest; and (3) establishments that operate facilities or provide services that enable patrons to participate in recreational activities or pursue amusement, hobby, and leisure-time interests.

72 Accommodation and Food Services: The accommodation and food services sector comprises establishments providing customers with lodging and/or preparing meals, snacks, and beverages for immediate consumption. The sector includes both accommodation and food services establishments because the two activities are often combined at the same establishment.

81 Other Services (except Public Administration): The other services (except public administration) sector comprises establishments engaged in providing services not specifically provided for elsewhere in the classification system. Establishments in this sector are primarily engaged in activities, such as equipment and machinery repair, promoting or administering religious activities, grant making, advocacy, and providing dry-cleaning and laundry services, personal care services, death care services, pet care services, photofinishing services, temporary parking services, and dating services.

92 Public Administration: The public administration sector consists of establishments of federal, state, and local government agencies that administer, oversee, and manage public programs and have executive, legislative, or judicial authority over other institutions within a given area. These agencies also set policy, create laws, adjudicate civil and criminal legal cases, provide for public safety and for national defense. In general, government establishments in the Public Administration sector oversee governmental programs and activities that are not performed by private establishments. Establishments in this sector typically are engaged in the organization and financing of the production of public goods and services, most of which are provided for free or at prices that are not economically significant.

A detailed list of NAICS codes may be accessed from the U.S. Census Bureau's website:
<http://www.census.gov/epcd/naics02/naicod02.htm>
