**FOR IMMEDIATE RELEASE**

Thursday, April 5, 2012

Contact: Wenlin Liu, Ph.D., Senior Economist

**Goshen County's Population Grew the Fastest in 2011**

**CHEYENNE** -- Wyoming's total resident population reached 568,158 in July 2011, according to estimates released by the U.S. Census Bureau. The increase from April 1, 2010 was 4,532 persons, or 0.8 percent. The estimated net migration, after accounting for the natural change (births and deaths), indicated that about 460 more persons moved into Wyoming than left the State since the 2010 Census. Wyoming's growth rate ranked the 28<sup>th</sup> fastest in the nation. In contrast, from 2006 to 2009, the annual net migration ranged between 5,000 and 10,000.

Across the State, the counties in the Northeast and Southwest that have more mineral extraction, particularly natural gas, experienced a tremendous slowdown in both employment and population growth since 2009. On the other hand, the Southeast and Northwest areas without much natural gas activities demonstrated higher population growth during the period. Mainly attributed to the opening of the new Medium Correctional Institution in Torrington, Goshen County showed the fastest increase. There were eight counties in the State that suffered population declines since the April 1, 2010 Census count. This is the first set of county population estimates to be published since the official 2010 Census population counts were released a year ago.

"Overall, a recession slows population movement across states," said Dr. Wenlin Liu, senior economist with the Economic Analysis Division. With the rapid loss of jobs and a jump in the unemployment rate in 2009, the State experienced the worst economic recession since the late 1980s. As a result, in-migration slowed down significantly after 2009. "People tend to move to areas where economies are viable, and this is particularly true for Wyoming."

Despite the State's energy led economic recovery since early 2010, out-of-state residents were still hesitant to move in, mainly due to the gradual improvement of job opportunities and slow housing market in the rest of the nation. The 0.8 percent growth rate was the State's weakest since 2001, and was slower than its neighboring states. "During the past couple of years, Wyoming attracted only a portion of the in-migrants that it did before 2010 from states like California and Michigan. On the other hand,

many workers with mining skills relocated to other states where the energy exploration was more active such as North Dakota, Oklahoma, and Pennsylvania," noted Dr. Liu. Partially due to the recession and weak economy, the number of births in the State declined nearly 6 percent since 2008. Attributed to population aging, the number of deaths increased more than 6 percent during the same period.

"It appears that the population and migration growth is always lagging behind the employment change in Wyoming. As long as the State's labor market performs better than the U.S., Wyoming's residents should still be discouraged from leaving, and people from other states may steadily move into the State again," said Dr. Liu.

1. Total population change includes a residual. This residual represents the change in population that cannot be attributed to any specific demographic component. See Population Estimates Terms and Definitions at <http://www.census.gov/popest/about/terms.html>.

2. Net international migration includes the international migration of both native and foreign-born populations. Specifically, it includes: (a) the net international migration of the foreign born, (b) the net migration between the United States and Puerto Rico, (c) the net migration of natives to and from the United States, and (d) the net movement of the Armed Forces population between the United States and overseas.
